ACADEMIC PROJECTS

THESIFY: An AI-Powered Academic Thesis Management and Panel Evaluation System with OCR-Based Panel Annotation Capture
Group Capstone Project
- Proposed a web-based system for thesis management, document version tracking, defense scheduling, and panel evaluation.
- Planned features include OCR-assisted capture of handwritten panel annotations and AI-assisted grammar and readability support.

AssetEase – Room Reservation and Equipment Borrowing System
Group Project
- Developed a PHP and MySQL-based system using XAMPP for room reservations and equipment borrowing.
- Applied web development and database management skills to support room scheduling and equipment borrowing processes.

MyCRM – Customer Relationship Management System
- Developed a web-based CRM system for managing contacts and organizing customer information.
- Implemented features for creating contacts, assigning values, adding notes, and categorizing contacts as leads or customers.
- Used PHP and MySQL for application functionality and database management.
